

Business Process Management

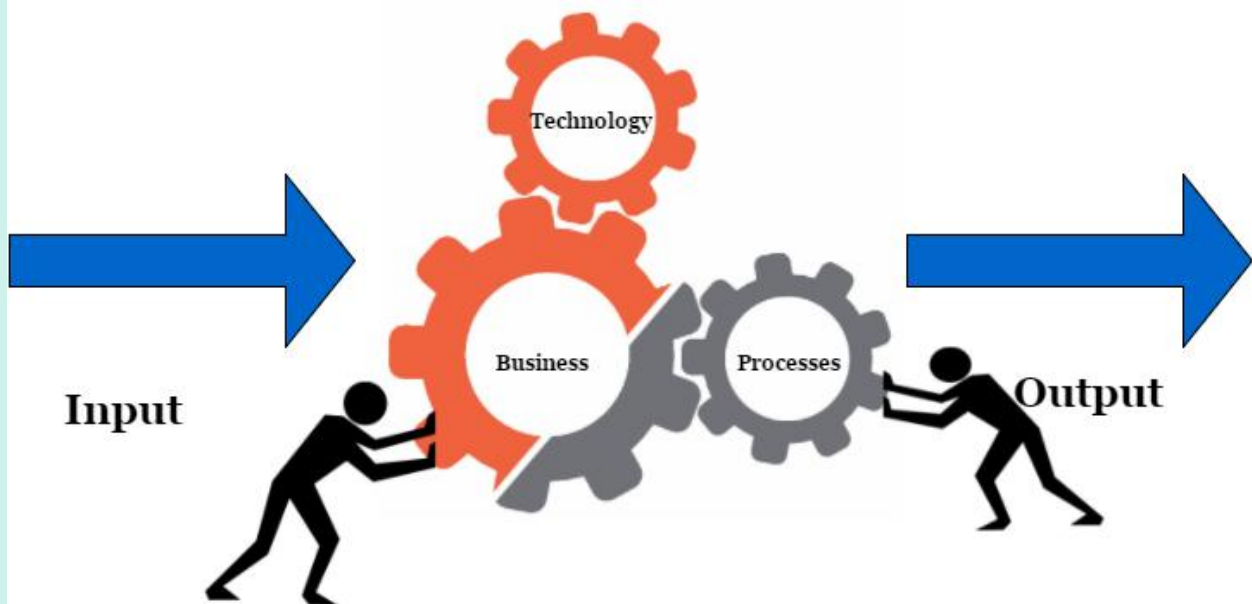

BPM

Business Process Management is a set of methodologies and technologies that system performs to formalize and improve the process to achieve organization goal.

Companies executes dozen, hundreds and thousands of processes every day, so BPM help them by handling challenges such as

- Who should perform the steps
- What business logics need to be implemented
- What is impeding our business process
- What type of deadlines to be imposed on every step of business workflow
- Who should be informed if the deadlines are not met
- What is current business process state and what would be its future state
- How requirements will be accomplished and many more...

So BPM is a business centric approach which includes many more facilities beyond the workflow which helps companies to map out their processes in a visualize manner.

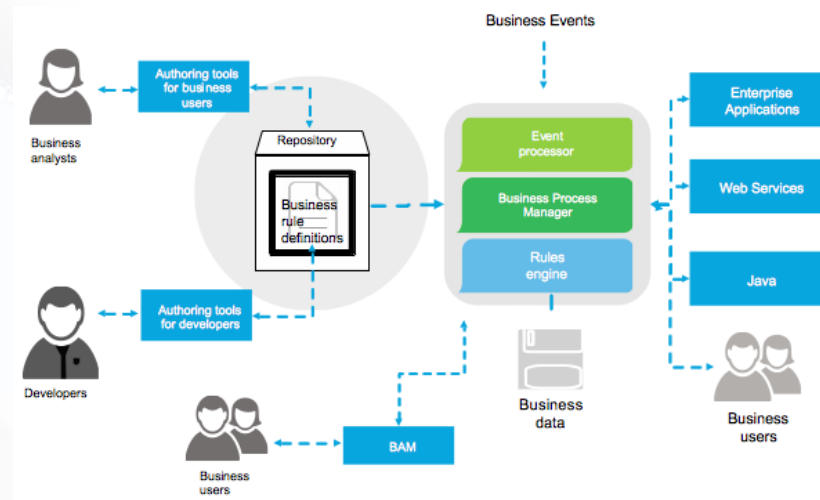

Business Process Management provides capabilities such as implementation of business rules for workflow engine, Form tools to capture information and route business information, Integration of form tools with business system to present and push the data into business system, Intelligent Analytic Dashboards, Self service portals, Allows adopting quick changes as business environment changes, Monitoring/Tracking/Measuring of processes to get insight on process performance, understanding of business processes through metrics.

The best performing companies have high efficiency of operations-both customers facing and internal.

ARCHITECTURE:

BENEFITS OF BPM:
Agility
Productivity
Efficiency & Reduced Risks
Compliance & Transparency
Employee Satisfaction
Customer Focus
Consistency, Repeatability & Transferability
Sustainability
Measurability
Technology Integration

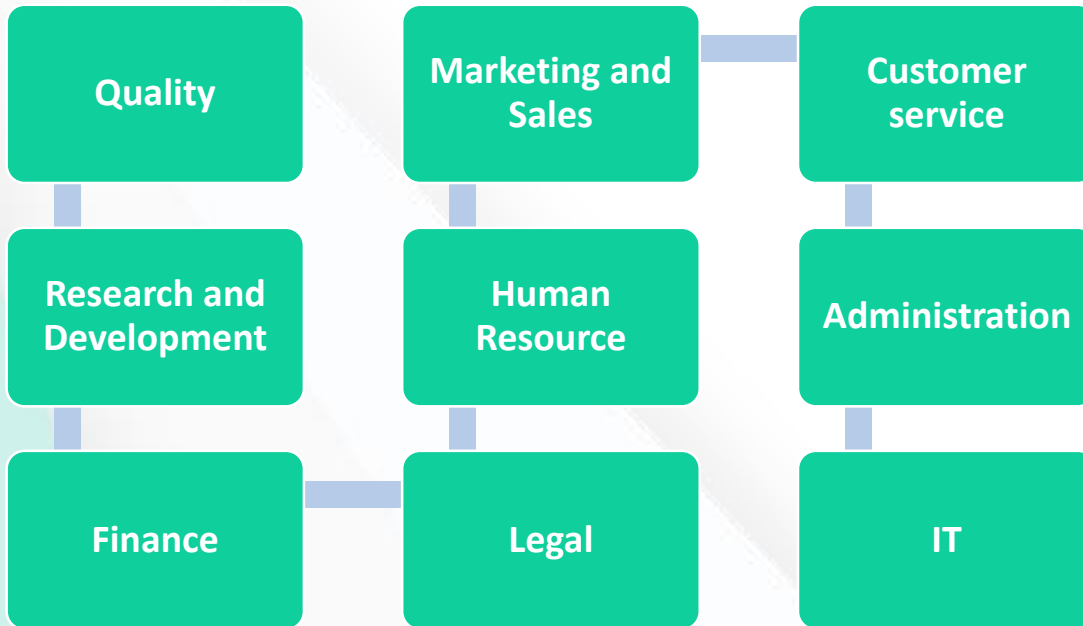

Working with LOB Applications:

Naesys's BPM suite compliments your LOB applications like SAP, Oracle Apps, People Soft, CRM products, etc.

Example: Systematic action on Revenue leaks

- SAP generates reports on all Accounts receivable pending for more than 6 months. Naesys routes the data to the respective people, based on account type, value, etc. and tracks it until closure.
- SAP generates reports on all dead inventories (greater than 365 days). Naesys routes the data to the respective people, based on type of product, quantity, etc. and tracks it until closure.

Automation can be done within departments and across departments.
